New Benefits for Clinically Integrated Network Providers

Mount Sinai Health Partners strives to provide support and value to our members' practices. Along those lines, we are pleased to announce the launch of a series of new value-added services for physician members of our Clinically Integrated Network, which will roll out over the coming year. In the first wave, we are pleased to report, that our professional liability insurer, Hospitals Insurance Company, Inc. (HIC), in conjunction with our risk management advisors, FOJP Service Corporation, have agreed to extend the opportunity to obtain low cost, high quality medical malpractice insurance to members of the Mount Sinai Health Partners CIN through HIC's VAP program. The VAP program has existed for over three decades and was previously limited to physicians with admitting privileges at an FOJP member hospital. It has been a tremendously successful and popular program and we are excited to now offer the opportunity to participate to CIN members.

To see whether this first benefit makes sense for you, we encourage you visit the HIC website (www.hicgroup.com), where you can compare rates by specialty and location by clicking on the "Get Rates" tab at the top of the page. Should you be interested in applying for coverage with HIC, please let us know so that a member of our Provider Services team can connect you with the appropriate resources. Please e-mail us at MSHP@mountsinai.org or call us at 877-234-6667.

As a member of our Clinically Integrated Network, we know you share our commitment to providing exceptional care and outcomes for all patients, and we feel that programs such as these are critical to this effort. Future benefits will include a variety of discounted practice management and support services that are focused on helping you reduce operating expenses and enhance the quality and efficiency of your practices.

We look forward to being in touch over the coming months with updates on new member-only benefits and how you can access them.
